CHEAT SHEET BY JANIS HUTZ
ETHZ, FS2026

1 Introduction

1.1 Probability

D 1.1 (Sum rule) $P(X) = \sum P(X, Y) = \sum P(X \cap Y)$

D 1.2 (Prod) $P(X, Y) = P(X|Y)P(Y) = P(Y|X)P(X)$

T 1.3 (Bayes) $P(Y_i|X) = \frac{P(X|Y_i)P(Y_i)}{\sum_{j=1}^n P(X|Y_j)P(Y_j)}$

D 1.4 (Cont. Var) Sums become integrals

e.g. $\sum_X P(X) = 1$ becomes $\int p(x) dx = 1$

D 1.5 (Indep.) x, y indep. iff $p(x, y) = p(x)p(y)$

D 1.6 (Cond. Indep.) iff $p(x, y|z) = p(x|z)p(y|z)$

D 1.7 $E[x] = \int_{-\infty}^{\infty} xp(x) dx$, also for $x = f(x)$

D 1.8 $\text{Cov}[x] = E[xx^\top] - E[x]E[x]^\top = \Sigma$

D 1.9 (Gauss. Dist.) $x \sim \mathcal{N}(\mu, \Sigma)$ (μ mean, Σ cov.).

PDF: $p(x) = \frac{1}{\sqrt{(2\pi)^k |\Sigma|}} \exp\left(-\frac{1}{2}(x - \mu)^\top \Sigma^{-1}(x - \mu)\right)$

1.2 Measurement models

$z = b_C + sM_S\omega + b + n + o$: b_C const bias, b time bias, M missal., $n \sim \mathcal{N}(0, R)$ noise, $s\omega$ corr. meas., o other infl.

2 Locomotion & Kinematics

2.1 Positioning

D 2.1 (Position Vector) $\boxed{W}t\boxed{B} = \boxed{W}t\boxed{W}\boxed{B}$, Original Frame, End point, Target Frame, $\sin = s$, $\cos = c$

D 2.2 (State vector) x_R : x, v of rob in W , pos of sensors

D 2.3 (Rot. Mat.) $\mathbf{R}_z = \begin{bmatrix} c(\psi) & -s(\psi) & 0 \\ s(\psi) & c(\psi) & 0 \\ 0 & 0 & 1 \end{bmatrix}$

$\mathbf{R}_y(\theta) = \begin{bmatrix} c(\theta) & 0 & s(\theta) \\ 0 & 1 & 0 \\ -s(\theta) & 0 & c(\theta) \end{bmatrix} \mathbf{R}_x(\varphi) \begin{bmatrix} 1 & 0 & 0 \\ 0 & c(\varphi) & -s(\varphi) \\ 0 & s(\varphi) & c(\varphi) \end{bmatrix}$

R 2.4 Application: ${}_W\mathbf{a} = \mathbf{R}_{WB} {}_B\mathbf{a}$

L 2.5 $\mathbf{R}_{BW} = \mathbf{R}_{WB}^{-1} = \mathbf{R}_{WB}^\top$, $\det(\mathbf{R}_{WB}) = 1$ (orth.)

R 2.6 Cols of \mathbf{R}_{WB} are basis vec. of Frame \vec{F}_B in \vec{F}_W

D 2.7 (Euler Angles) Yaw (z), Pitch (y), Roll (x), mult. rotation matrices, e.g. $\mathbf{R}_{EB} = \mathbf{R}_z(\psi) \cdot \mathbf{R}_y(\theta) \cdot \mathbf{R}_x(\varphi)$, bound. $[n]^\times = nx^\top$ (matrix from vec + arg x)

D 2.8 (Rot. Vec) $\alpha = \alpha \mathbf{n}$ (\mathbf{n} normal)

$\mathbf{R}(\alpha, \mathbf{n}) = \mathbf{I}_3 + \sin(\alpha)[\mathbf{n}]^\times + (1 - \cos(\alpha))([\mathbf{n}]^\times)^2$

D 2.9 (Quaternions) $q = q_w + q_x i + q_y j + q_z k$ with $i^2 = j^2 = k^2 = -1$, ($ij = -ji = k$, same for jk and ki)

D 2.10 (Transf. M) $\mathbf{T}_{AB} = \begin{bmatrix} \mathbf{R}_{AB} & A\mathbf{t}_B \\ \mathbf{0}_{1 \times 3} & 1 \end{bmatrix}$

$\mathbf{T}_{BA} = \mathbf{T}_{AB}^{-1} = \begin{bmatrix} \mathbf{R}_{AB}^\top & -\mathbf{R}_{ABA}^\top \mathbf{t}_B \\ \mathbf{0}_{1 \times 3} & 1 \end{bmatrix} \mathbf{T}_{AC} = \mathbf{T}_{AB} \mathbf{T}_{BC}$
