“A funny quote by a professor”

- Prof. Dr. Professor Name, YEAR

HS2026, ETHZ
Summary of the Script and Lectures

Contents

1	Introduction	2
2	OCAML	3
2.1	The basics	3
3	x86Lite	3
4	LLVM	3
5	Parsing	3
6	Lexing	3
7	Optimizations	3

1 Introduction

This summary is still a very early version and structure and content will still change and errors will be fixed.

2 OCAML

2.1 The basics

OCAML is a compiled, functional programming language and a descendant of the Meta Language programming language. In contrast to other functional programming languages (such as Haskell), it is actually used in the wild by more than two people.

File: code/ocaml/00_basics.ml

```
1 let a_function (a : int) (b : int) : int = a * b
```

3 x86Lite

4 LLVM

5 Parsing

6 Lexing

7 Optimizations
